Yanis Bendehane

Engineering Student in Computer Science | Backend and Distributed Systems

Aix-en-Provence, France | bendehane.yanispro@gmail.com | linkedin.com/in/yanisb9

Summary

Computer science engineering student in an apprenticeship at Thales, developing mission-critical defense software in Java. Built microservices with authentication, containerized deployment and data pipelines in academic projects. Seeking a 17-week research internship abroad in distributed systems, mid-June to mid-October 2027.

Education

CESI School of Engineering, MEng in Computer Science – Aix-en-Provence, France Sept 2023 – Sept 2028

- French Diplôme d'Ingénieur (CTI-accredited, Master's level): integrated preparatory cycle 2023–2025, apprenticeship engineering cycle with Thales 2025–2028
- Engineering cycle: semester 5 fully validated with grade A in every teaching unit; operations research unit graded A

Lycée Jean Monnet, Bac in Mathematics and Physics-Chemistry, with honors (Mention Bien) – Vitrolles, France Sept 2020 – July 2023

Experience

Apprentice Software Engineer, Thales Services Numériques – Aix-en-Provence, France Oct 2025 – present

- Develop and test features of a large-scale, mission-critical defense software system in Java on Linux, within a 40-person engineering team spread over three sites
- Implemented the display and gateway layers of a software evolution in an MVC-style architecture, from specification to integration testing
- Ramped up on a legacy codebase built on proprietary frameworks with little documentation, through code reading and knowledge transfer from senior engineers

IT Intern, LyondellBasell – Berre-l'Étang, France Apr 2025 – June 2025

- Rebuilt a legacy C++ (MFC) program as a standalone C# Windows service that synchronizes tank logistics states between a real-time industrial database (AspenTech IP.21) and SQL Server over ODBC

Academic Projects

Microservices social network (team of 3, Distributed Applications module) June 2026

- Owned the authentication service (Node.js, Express, PostgreSQL, Sequelize, JWT with refresh tokens, bcrypt) and the infrastructure layer
- Deployed 7 Docker containers with Docker Compose behind an Nginx API gateway validating JWTs before routing

Hospital data warehouse (team of 4, Big Data module) Oct 2026 – present

- Designed a decision-support data warehouse of four star schemas (conformed dimensions, surrogate keys) for hospital activity data
- Built Talend ETL jobs loading PostgreSQL, with pseudonymization of patient identifiers (salted SHA-256)

Backup software in C# .NET 8 (team of 4, Software Engineering module) Jan 2026 – Feb 2026

- Delivered three versions: an MVC console app, an Avalonia desktop interface in MVVM with file encryption, then multithreaded backup jobs with priorities and centralized logging
- Full and differential backups, real-time progress tracking, two interface languages; logging packaged as a reusable DLL (JSON/XML), Git branching workflow

Leadership and Volunteering

Co-organizer, charity football tournament (CESI civic engineering project) Jan 2024 – June 2026

- Organized three editions with a team of five; proceeds donated to charities chosen by the winning teams (incl. Les Restos du Cœur, ShareTheMeal)

Skills

Backend: Node.js, Express, REST APIs, JWT, Sequelize, Mongoose, Java, C# .NET

Frontend: React, Next.js, Tailwind CSS

Data: PostgreSQL, MongoDB, SQL Server, Talend

DevOps: Docker, Docker Compose, Nginx, Linux, Git, Subversion

Languages: French (native), English (B2, TOEIC practice test 865/990), Spanish (school level), Arabic (basic)

Certification: ANSSI SecNumacadémie (French national cybersecurity MOOC)
